

**ILLUSTRATIO** is a research group devoted to illustration studies. It was founded by 4 French scholars and aims at bringing together illustrators, printmakers, publishers, curators, collectors and academics who have a common interest in illustration in all its facets from the 16th to the 21st centuries.

We welcome a variety of approaches with a bias for print culture, material culture and the history of the book. We are glad of a chance to get our hands dirty and delve into the practical and technical aspects of illustration. Our principal field of investigation is the Anglophone world but we are also open to other geographical spheres.

We hope to help make illustration with its ever expanding modes of practice a research field in its own right and to provide a stimulating framework for multifaceted and interdisciplinary methodologies. Our goal is to set up and develop an international and intermedial collaborative network of practitioners and researchers who convene regularly on the subject, discuss new innovative subject matter and contribute to research activities, resources and experimental approaches.

We are planning a series of symposia that will take place in each of our universities in 2014 and 2015 (Dijon, Nancy, Mulhouse and Valenciennes). That series will be followed by a major international conference in 2016.

The working languages of our network are French, English and drawing.
